Live Session: DeepDive to OOP
Welcome to the live session on 'Working with Git'. The live session length will
be 1 hour 30 minutes.
In this session, the SME will be covering some of the introductory concepts of Git.
This session will be covering the following topics:
● OOPs concepts
Note for the SME:
● This is going to be a purely interactive session wherein the trainer would try to engage
students more.
● Before running the commands on a command prompt, ask the learners about their
expected outputs.
● Please make sure to test run these commands prior to the session to avoid any
hick-up during the session.

Part 1 :Introduction(40 minues)(each of the following should be explained with live code)
   a. Types of Inheritance
   b. Inheritance vs Polymorphism
   c. Generics
   d. ArrayList basic
   e. Custom ArrayList
Pause: take a break for 5 minutes

Part 2: Continuation to OOPs concepts(45 minutes))(each of the following should be
explained with live code)
   a. Lambda Expressions
   b. Collections Framework
   c. Annotation
   d. Object class
